Claims 1-5, 7-10, 13-17, 20, 21 are allowed.

Although very close devices such as the deep trench isolated transistors with channel stop layers shown in PN: 5,485,029 were known in the art, the claimed bipolar transistor having all claimed elements and specifically provided with a spacer on said heavily doped polysilicon layer to define a self-aligned emitter layer and to define a lateral boundary between the base portion characterized by a sidewall layer of an opening and the emitter layer of the structure in the total claimed configuration is not taught or rendered obvious by the prior arts.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See PN: 5,485,029.
